PRACTICAL AI

Your 30-day AI starter plan

About 15 minutes a day · By Rahul, senior engineer, Germany · @imsikarwar.rahul

Use made-up or anonymised material until you trust your process. Always check the output against your source.

Week	Do	You are done when
1 Ask + check	1. Pick one question. Ask it vaguely, then with a role, context, task and format. 2. Compare the two answers. 3. Spot-check one name, number or date against a source. 4. Ask the AI: “What are you unsure about?” 5. Write down one thing it got wrong.	You can explain why the second answer was better and what was still wrong.
2 3 tasks	1. Choose three weekly tasks: summarise, draft, organise. 2. Run each on made-up material. 3. Compare with your own version. 4. Note which saved effort and which did not.	You know which task AI helps with and which it does not.
3 Own material	1. Take one real task and remove names and private details. 2. Check every row or sentence against the source. 3. Check your employer’s AI policy before using work material.	You catch at least one error or gap and can say how.
4 Routine + agents	1. Save the prompt that worked and a short checklist. 2. Try one small multi-step task (an “agent”) with a human approval point. 3. Review what it actually did before you rely on it.	You have a routine you would give a colleague.

Weekly question

> What did the AI get wrong this week, and how did I catch it?

Stay safe

- No passwords, client data or private details in public AI tools.
- Removing names is not the same as anonymising.
- Not legal advice: follow your company’s policy.
