PRACTICAL AI

Check any AI answer in 3 passes

By Rahul · Senior engineer, 10+ years in software · Germany · @imsikarwar.rahul

AI can sound sure and still be wrong. Before you use or share an AI answer, make three passes. It takes a few minutes and catches many common problems. It does not catch everything.

Pass 1: Accuracy

- Compare every name, number and date with your source.
- Look for anything the answer states that is not in your material. If you did not give it, treat it as unverified.
- Ask: “Which parts are you unsure about?” and check those first.

Pass 2: Completeness

- What should be in the answer but is not? Who or what is missing?
- Are there open questions the answer skipped? Ask for them directly.
- If a field was missing in your material, did the answer say “not specified” or did it guess?

Pass 3: Usability

- Could someone act on this tomorrow without asking you anything?
- Is the format right (table, checklist, short email)? Ask for a different one if not.
- Does it sound like you? Read it aloud and remove anything you would not say.

Prompt to start with

> Review your answer above in three passes. 1) Accuracy: list every claim that is not directly supported by the text I gave you. 2) Completeness: list what is missing. 3) Usability: say what I would need to change before sending it. Do not rewrite it yet.

Remember

- Do not paste passwords, client data or private details. Check your company’s AI policy.
- You stay responsible for what you send.
