100 DAYS OF PRACTICAL AI

The AI Starter Pack: tested, not hyped

By Rahul · @imsikarwar.rahul · free to share · v1, November 2026

Every card in this pack comes from a **real AI test** I ran with made-up data and checked myself (the matching Reels are on my profile). Each card shows what I tested, what the AI got right and where it still needs your eyes.

Inside

1. Meeting notes to clear next steps	tested 1 Nov 2026
2. Free-trial checklist	tested 3 Nov 2026
3. Tailor your resume without lying	tested 3 Nov 2026
4. Is this message a scam? 5 checks	tested 3 Nov 2026

How to use these safely

- Paste only **made-up or non-sensitive text** into any AI tool. No bank details, passwords, OTPs or anyone's private data.
- Treat every answer as a **draft**. Check it against the original.
- AI cannot open your links, see your real bank or billing page, or know who really sent a message.
- These are my own tests (one run, one model each). Results can differ for you.

General information only, not financial, legal or professional advice.

New card every week

Follow **@imsikarwar.rahul** for the next tested task. Comment the keyword shown in a Reel and I will send you the matching card.

100 DAYS OF PRACTICAL AI

Meeting notes to clear next steps: the AI mistake-catching checklist

By Rahul · Senior engineer, 10+ years in software · Germany · @imsikarwar.rahul

The prompt I tested

> Turn these meeting notes into a table:
> Task | Owner | Deadline | Missing information
>
> Use only the facts provided. Write “Not specified” for missing owners or deadlines. Do not invent details. Distinguish completed items from open actions. Finish with the questions we need to resolve.
>
> Notes:
> [paste your anonymised notes]

What happened when I tested it

I ran this in ChatGPT (Instant mode, 31 Oct 2026) on five short, fictional meeting notes. It returned a table with 1 completed item, 2 open actions, 1 blocked task and 1 scheduled check-in, wrote “Not specified” for missing owners and deadlines, and listed questions to resolve. One test on one example is not proof it always works.

Check every row before you share it (2 minutes)

1. Compare each row with your notes. Nothing should be missing from the notes and nothing new should appear.
2. Look for invented details: names, dates, numbers, reasons. If it is not in your notes, delete it.
3. Every task has an owner and a deadline, or the table says “Not specified”. Do not guess; ask the team.
4. Turn “Thursday” and “Monday” into real dates yourself.
5. Blocked items: who unblocks them, and by when?
6. Check completed versus open. Do not let “approved” become “done” unless your notes say so.
7. Send the unanswered questions to the right people.

Before you paste

Remove names, client details and anything private or confidential. Use anonymised notes unless your organisation allows otherwise.

When not to trust it

Long or messy notes, notes mixing several projects, or anything legal, medical or financial. AI summaries can miss context. You are still responsible for the result.

Free-trial checklist: don't get charged by surprise

By Rahul · @imsikarwar.rahul · one page, 3 minutes

1. Find every trial (5 minutes, once)

- **iPhone:** Settings → your name → Subscriptions.
- **Android:** Google Play → your profile picture → Payments & subscriptions → Subscriptions.
- **UPI users:** open your UPI app and look for AutoPay / mandates.
- **Websites and AI plans:** check Settings → Billing or Account on each site. Check your email for “trial” and “welcome” messages.

2. Write each end date in your calendar

For every trial note the name, the end date and the price after the trial. Set a reminder **3 days before**. Free periods run from the day *you* signed up, so your date can differ from a friend’s.

> **Reported, not confirmed by me:** the free ChatGPT Go offer in India reportedly began on 4 November 2025 and runs 12 months from each person’s own sign-up, so your end date depends on when you signed up. After the free year the card on file is reportedly billed unless you cancel, at about ₹399 a month. Check your own date and price on your own account. I do not use this plan and cannot check yours.

3. Decide before the date, not after

Keep it, or cancel **on the same place you subscribed** (the app store, the website or the payment app). Uninstalling an app does not cancel a subscription. Cancelling is your choice; this card does not tell you what to do.

Optional: ask AI to sort the dates (then check)

> Today is [today’s date]. Here is my list of free trials with start dates and trial lengths: [paste]. Which start charging within the next 30 days? Give each date and a one-line calendar reminder. If a date is unclear, say so instead of guessing.

I tested this on a made-up list of 10 trials with traps (one cancelled, one with no card, one renewing yearly, one with two conflicting dates; Claude, 3 Nov 2026). It matched all 10 answer-key lines and invented no dates, but on the conflicting one it led with the later date. One run, one model. It only knows what you type and cannot see your real billing page. Always check the real date there.

Tailor your resume with AI, without lying

By Rahul · @imsikarwar.rahul · 3 steps, 5 minutes

Step 1: give AI the facts and the rules

> Here is my real resume and a job post. Rewrite my summary and bullets to fit the job. Use only facts that are in my resume. Do not add tools, numbers, employers or skills I did not list. List the job requirements my resume does not show as “gaps” instead of claiming them.
>
> Resume: [paste]
> Job post: [paste]

Step 2: check line by line (the part people skip)

- Does every skill, tool and duty appear in your original resume?
- Any new numbers, percentages or titles? Delete them unless true.
- Words like “detail-oriented” are the AI’s wording, not facts. Keep only what you can back up in an interview.

Step 3: handle the gaps honestly

If the job asks for something you have not done, either learn it, mention that you are learning it, or leave it out. Never claim it.

I tested this on a made-up resume (Claude, 3 Nov 2026) and even told it to “add Power BI” and call me a data analyst. It refused both and listed Power BI as “currently learning”, but it still added small phrases of its own (“for stakeholders”, “before releases”). That is why Step 2 matters. One run, one model, one example. Another prompt or tool may behave differently. This will not get you a job; it only saves editing time.

100 DAYS OF PRACTICAL AI

Is this message a scam? 5 quick checks

By Rahul · @imsikarwar.rahul · before you tap any link

1. **Pressure:** “expires today”, “account will be blocked”. Real banks rarely threaten by SMS.
2. **Link:** short links or look-alike names (not the bank’s real address) are a warning. Do not click suspicious or unverified links; type the official address or use the official app.
3. **Asks for secrets:** OTP, PIN, password, card number. Never share them with anyone, and never read an OTP out to a caller or agent, even one who says they are from the bank.
4. **Small unexpected fee:** “pay ₹29 for redelivery” is a classic. Check parcels in the courier’s own app.
5. **You did not start it:** an OTP text is normal only if *you* started that payment. If not, call your bank on its official number.

What to do instead

- Open the official app yourself or call your bank on its official number.
- Ask a family member if unsure. Report to your bank. Delete the message.

Using AI as a second opinion

> Here are three messages I received: [paste]. For each, say if it looks like a scam, list the red flags, and what I should do. Say how sure you are and what you cannot check.

I tested this on six made-up messages (Claude, 3 Nov 2026): two genuine, four scams, including an OTP trick and a look-alike bank link. It got all six right and flagged nothing genuine as a scam. They were still examples I wrote myself. AI cannot open links or see who really sent a message, so it can be wrong. Verify in the official app.
