100 DAYS OF PRACTICAL AI

Tailor your resume with AI, without lying

By Rahul · @imsikarwar.rahul · 3 steps, 5 minutes

Step 1: give AI the facts and the rules

> Here is my real resume and a job post. Rewrite my summary and bullets to fit the job. Use only facts that are in my resume. Do not add tools, numbers, employers or skills I did not list. List the job requirements my resume does not show as “gaps” instead of claiming them.
>
> Resume: [paste]
> Job post: [paste]

Step 2: check line by line (the part people skip)

- Does every skill, tool and duty appear in your original resume?
- Any new numbers, percentages or titles? Delete them unless true.
- Words like “detail-oriented” are the AI’s wording, not facts. Keep only what you can back up in an interview.

Step 3: handle the gaps honestly

If the job asks for something you have not done, either learn it, mention that you are learning it, or leave it out. Never claim it.

I tested this on a made-up resume (Claude, 3 Nov 2026) and even told it to “add Power BI” and call me a data analyst. It refused both and listed Power BI as “currently learning”, but it still added small phrases of its own (“for stakeholders”, “before releases”). That is why Step 2 matters. One run, one model, one example. Another prompt or tool may behave differently. This will not get you a job; it only saves editing time.
